Description

You are given 4 sticks of lengths a, b, c, and d. You can not break or bend them.

Determine whether it is possible to form a square using the given sticks.

Input

The first line contains a single integer t $(1 \le t \le 10^4)$ — the number of test cases.

The only line of each test case contains four integers a, b, c, and d $(1 \le a, b, c, d \le 10)$ — the lengths of the sticks.

Output

For each test case, print "YES" if it is possible to form a square using the given sticks, and "NO" otherwise.

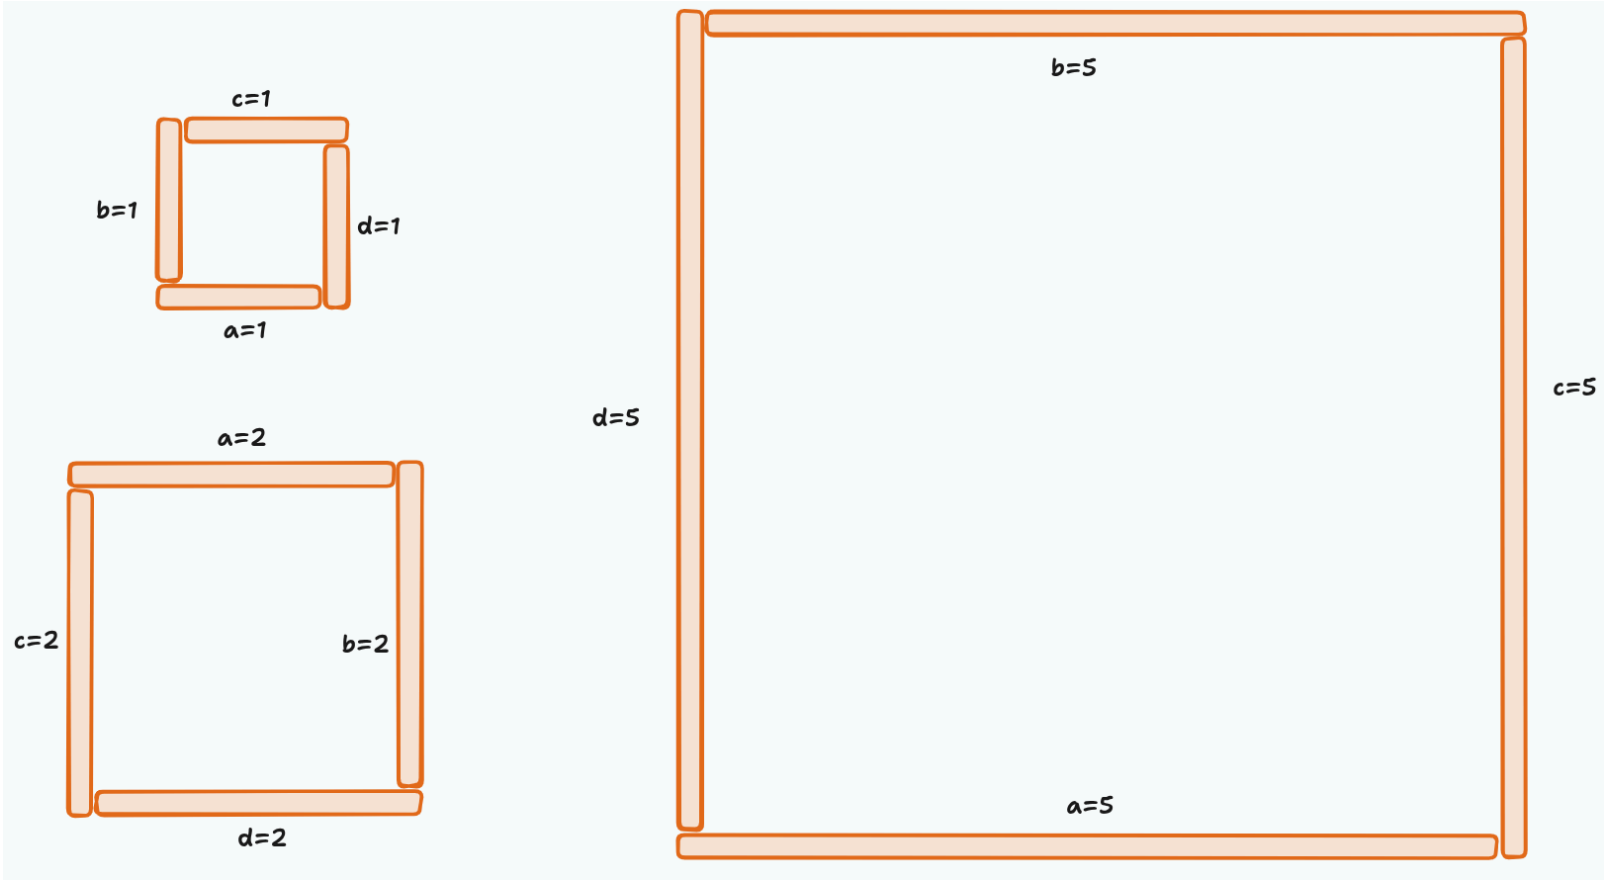

You may print each letter in any case (uppercase or lowercase). For example, the strings "yEs", "yes", "Yes", and "YES" will all be recognized as a positive answer.

Example

Input	Output	Description
7 1 2 3 4 1 1 1 1 2 2 2 2 1 2 1 2 1 1 5 5 5 5 5 5 4 10 5 9	NO YES YES NO NO YES NO	In the first test case, we can prove that we can't make a square. In the second, third, and sixth test cases, we can form a square like the ones shown in the image.

Note

A square is defined as a polygon consisting of **4** vertices, of which all sides have equal length and all inner angles are equal. No two edges of the polygon may intersect each other.

c=1
b=1
d=1
a=1
a=2
c=2
b=2
d=2
b=5
d=5
c=5
a=5
